Joints are locations in the body where bones meet. They enable movement and are classified by either their structure or function. Structural classifications of joints include fibrous, cartilaginous, and synovial joints.

Functional classifications of joints include immovable, slightly movable, and

The point at which two or more bones meet is called a joint or articulation. Joints are responsible for movement (e.g., the movement of limbs) and stability (e.g., the stability found in the bones of the skull). There are two ways to classify joints: on the basis of their structure or on the basis of their function.
